DESIGN DELL'INCONTRO

FOCOTTO™

FUMOTTO™

design Riccardo Diotallevi

Focotto is a start-up company that is born from a solid industrial and architectural background and experience. Its mission is to design and create equipment to experience the outdoors in a whole new way.

Focotto creates the best comfort conditions for people, to inspire socialization and to meet, share and satisfy the needs of others.

Innovation and technological research and models for new lifestyles are achieved through original designs and the creation of products featuring value added because they ensure ease of use and create wellness for the individual.

We foster respect for our future, both environmental and social, thus we have chosen the “MaKe in Italy” slogan.

dehors with fire

Excellent for cocktail parties and ideal to relax or warm up by the fire, Focotto is the perfect answer to experience outdoor space all year long, protected from rain or sun.

Available in Full Optional, Freedom and Free Standing models, Focotto is customizable in shapes and materials, to adapt to different kind of uses.

PELLET

THE BIRTH OF FOCOTTO

Focotto was born from an idea of Carlo Capecci, a creative entrepreneur of the Marche region, who wanted to create a small piece of outdoor architecture with which people could warm up around the fire.

The meeting with the architect Riccardo Diotallevi made this idea real.

The project had to have a prerequisite: the exemption from a building permit to be installed on the ground.

Loosely inspired to the Bialetti's moka coffee machine, Focotto, instead of coffee makes a flame burn at its center, while its octagonal volume, as a sacred symbol of the link between earth and sky, creates a truly "outdoorsy" item.

The octagonal shape is a recurring element for the roof, the benches and the base, at which center there is a metallic cone that supports the roof and contains the propane tank to supply and protect the long vertical flame.

DEHORS WITH FIRE

Focotto is a modular system that comprises an octagonal base with floor and a central heating structure that supports a metallic large umbrella.

Available in Full Optional, Freedom and Free Standing models, Focotto is customizable in shapes and materials, to adapt to different kind of uses.

The assembly is fast and the floor mounted installation, without need for a mortar, does not require building permits.

The sharing of time and space is reserved to eight or fourteen people that, seated around the fire, relive the charm of ancient customs, told with a contemporary design language.

MATERIALS

1 COPERTURA:
Aluminum and
polyethylene removable
panels.

Steel structure with
cataphoresis treatment and
outdoor paints.

2 HEATING TUBE:
Pyrolytic glass.

3 TABLE:
Laminated white
wood/ Birch wood.

4 CORPO:
Stainless steel powder
coated for outdoor use.
White color/ Black color.

5 BASE PLATE:
Honed marble grit.

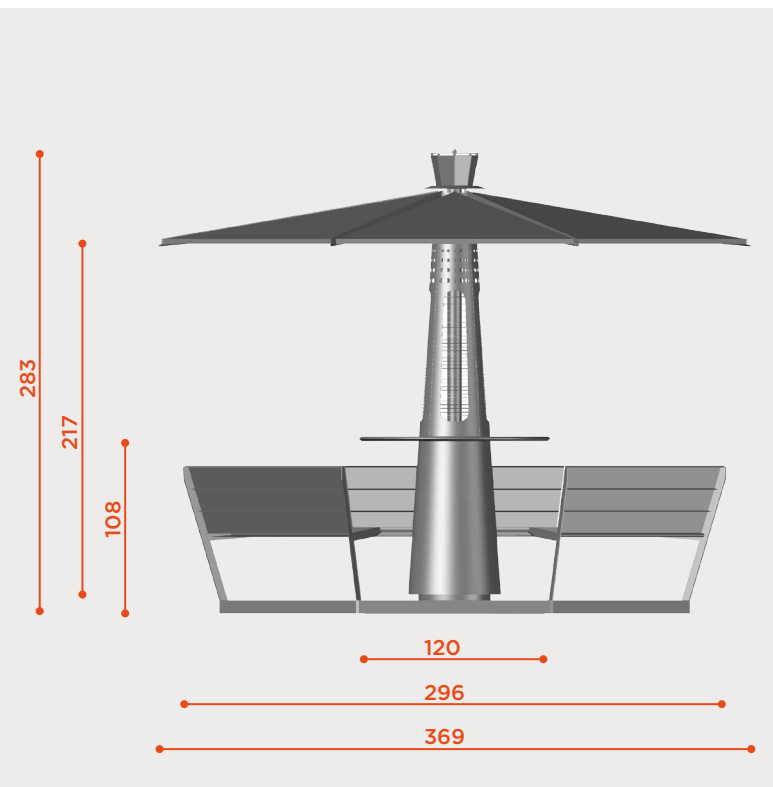

6 SEATS:
Garapa wood/
WPC wood.
WPC wood,
brown/ gray color.
Steel structure with
cataphoresis treatment and
outdoor paints.

7 PEDANA:
Garapa wood/
WPC wood/
Grit polished marble.
WPC wood,
brown/ gray color.
Hot galvanized steel
structure.

MATERIALS

SPECIFICATIONS

WEIGHT:

780 kg (Full Optional model)

MINIMUM BEARING SURFACE CAPACITY:

300 kg/m2 (Full Optional model)

INSTALLATION:

Dry, outdoors or in open porches.

INSTALLATION TIME:

1 h 15'

SUPPLY:

LPG or Methane.

EC APPROVAL:

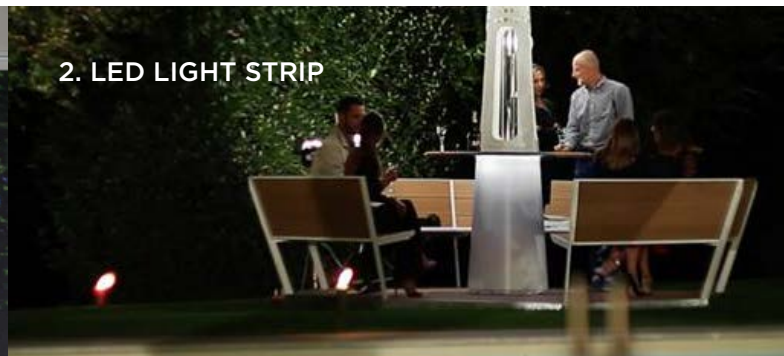

In accordance with EU directives UNI EN 1860-1: 2013, 2004/35/EC, 2001/95/EC, as amended.

ACCESSORIES

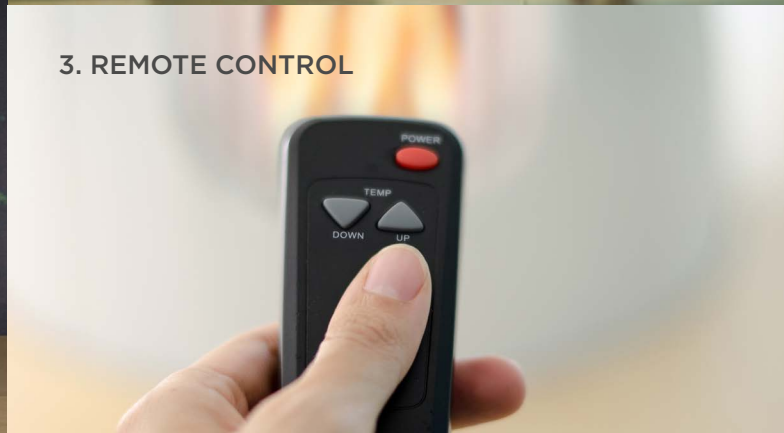

1. PROTECTION

THE BIRTH OF FUMOTTO

Once the Focotto design was completed, a new item was designed: Fumotto, a wood-burning fireplace that can be placed anywhere to warm up and also cook.

Thought out as the dart of a blow pipe, Fumotto has been constructively thought out as a single iron metal sheet.

Fumotto, through a specific accessory that supports an extra-sized stainless steel grid can turn into a perfect barbecue.

A belt-handle in stainless steel becomes the gripping point that allows rotating the fireplace on its colored cement grit to change orientation and avoid the smoke.

Focotto was featured on the ADI Design Index 2016, an annual selection of the best Italian design product of the year.

THE ROTATING FIREPLACE

Enjoying the company of friends, warming up by the fire or cooking a meal together. Fumotto is a rotating fireplace to be positioned in full freedom in outdoor environments.

The fireplace rotates on its base in colored grit to obtain the best position of use in windy conditions.

A metallic mantle (painted or Cor-Ten) contains and embraces like a glove the fire and channels the fumes upwards. The hook that connects to the structure adjusts the suction through the movement of a fume damper valve.

Fumotto is a fireplace whose structure and function blend in a single solution, but it can also be equipped with accessories to turn into a practical barbecue.

ADI DESIGN INDEX

selected by

ADI DESIGN INDEX 2016

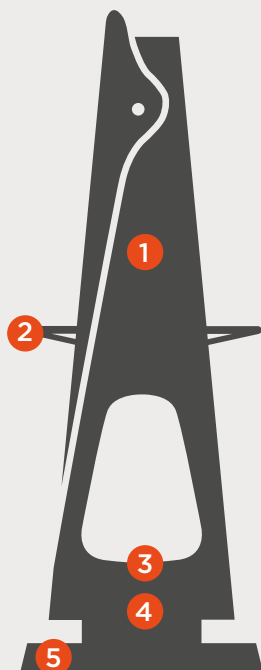

Focotto was selected and featured on the prestigious ADI Design Index 2016, an annual publication by ADI for Industrial Design that collects the best Italian design manufactured in a specific year.

Products awarded are those that distinguish themselves for their originality and functional innovation, whether by form or by type, for the research on the materials and production processes, communication and distribution.

All products and services selected are published also on the website www.adidesignindex.com, that includes additional documentation and details respect to the printed version.

Only the products selected by the ADI Design Index can participate every two years to the "Compasso d'Oro ADI" award, a prize that since 1954 has been deemed the most prestigious and authoritative recognition in the world for the "Made in Italy" Design.

MATERIALS

**1 EXTERNAL METAL SHEET:**

Corten steel/
Black painted iron,
high temperature paint.

2 WHEEL:

Stainless steel.

3 ASH GRATE:

Cast iron.

4 BASE:

Refractory cement.

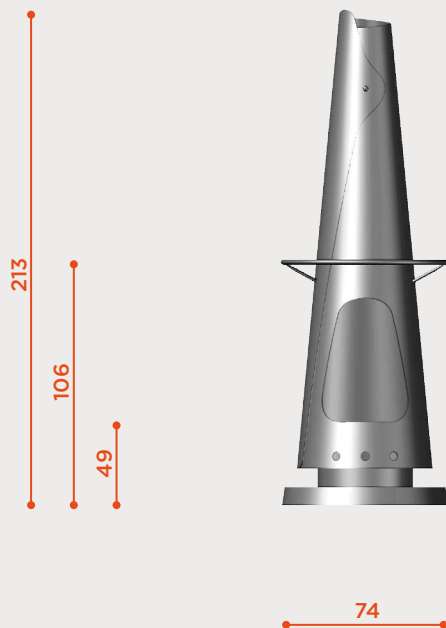

5 BASE PLATE:

Honed marble grit.
Brick red color/ Gray color.

MATERIALS

SPECIFICATIONS

**WEIGHT:**

210 Kg (Cor-Ten model)

**MINIMUM BEARING SURFACE CAPACITY:**

480 Kg/m² (Cor-Ten model)

**INSTALLATION:**

Dry, outdoors or in open porches.

**INSTALLATION TIME:**

30'

**SUPPLY:**

Wood or Pellet.

**EC APPROVALS:**

In accordance with EU directives UNI EN 1860-1: 2013, 2004/35/EC, 2001/95/EC, as amended.

SAFETY INFO

Focotto products are marked CE certifying their compliance to essential safety requirements established by the European Union provisions. The CE marking pertains both to the design and manufacturing aspects of the product through a series of inspections that verify that all the requirements are met.

Focotto, through a special channeling system allows the fumes to exit from its top without needing any interventions from users.

Heating devices on the market for outdoor use are usually not protected against weather agents around their heating element, with the consequent result that the mechanism supplying the flame, if wet by the rain, may be damaged.

Heating element with Italkero burner.

CONSTRUCTION INFO

Normal gazebos or structures with wooden roofs are considered as a separate building and require permits for construction according to law, thus are subject to regulations on distances with neighboring boundaries and neighbors.

Focotto, built on a single pillar without the need to be anchored on the ground, falls under the definition of “furnishing of residence-based areas” thus falling under the regulation of “construction works without the need for a building permit” (art. 6 of the D.P.R. No. 380/2001) and as such it is not subjected to meeting the requirements for urban development in terms of distances and volumes.

Focotto and Fumotto are two patented devices with models registered at the European Union (DMC) and recorded at the European Union Intellectual Property Office (EUIPO).
